

Sector I – Upper Myczkowce reservoir.

Part of the Myczkowce Reservoir on the River San. Length of the sector – ca. 2.5 km, width – 100-300 m, depth – 1,5-7 m. Eligible fish: brown trout (*Salmo trutta trutta m. fario*) – 95%, grayling (*Thymallus thymallus*) – 5%. Associated species: pike (*Esox lucius*), perch (*Perca fluviatilis*), roach (*Rutilus rutilus*) and whitefish (*Coregonus sp.*). During periods of water release from the Solina Reservoir the volume of water is ca. 350 m³/sec. (otherwise the water is almost still). There is a lot of aquatic vegetation in the parts of the reservoir with still water. The competition sector is from the bridge in Solina to the mouth of the stream Bóbrka. Practice water: part of the Myczkowce Reservoir from the end of village Andrzejówka to the dam in Myczkowce.

Sector II – Lower Myczkowce reservoir.

Part of the Myczkowce Reservoir on the River San. Length of the sector – ca. 3,0 km, width – 100-300 m, depth – 1,5-7 m. Eligible fish: brown trout (*Salmo trutta trutta m. fario*) – 99%, grayling (*Thymallus thymallus*) – 1%. Associated species: pike (*Esox lucius*), perch (*Perca fluviatilis*), roach (*Rutilus rutilus*) and whitefish (*Coregonus sp.*). Basically the water is still. There is a lot of aquatic vegetation in the parts of the reservoir with still water. The competition sector is from the village Bóbrka to the end of village Andrzejówka.

Official practice water: part of the Myczkowce Reservoir from the end of village Andrzejówka to the dam in Myczkowce.

Sector III – River San – Lesko.

Average width of the river – 120 m., depth – 0.5 m, water volume flow – 22,4 m³/sec. (low volume is ca. 8.0 m³/sec). The water current is medium or slow. Eligible fish: brown trout – 30%, grayling – 70%, huchen < 1%. Associated species: chub, dace and ide. The sector is from the village Hoczew to the village Huzele. The practice waters are located below the sector. Aquatic vegetation flourishes abundantly in many parts of the river, but doesn't hinder fly fishing.

Sector IV – River San – Postołów.

Average width of the river – 120 m., depth – 0.5 m, water volume flow – 23,0 m³/sec. (low volume is ca. 8.0 m³/sec). The water current is medium or slow. Eligible fish: brown trout – 30%, grayling – 70%, huchen < 1%. Associated species: chub, dace and ide. The sector is from the village Postołów to the village Manasterzec. The practice waters are located below the sector. Aquatic vegetation flourishes abundantly in many parts of the river, but doesn't hinder fly fishing.

Sector V – River San Zwierzyń.

Average width of the river – 80 m., depth – 0.6 m, volume – 20,4 m³/sek. (low volume is ca. 8.0 m³/sec). The water current is medium or slow. Eligible fish: brown trout – 50%, grayling – 50%, huchen < 1%. Associated species: chub, and dace. The competition sector is from the bridge at the power station in Zwierzyń to the fordin the willage Bachlawa. The practice water is located immediately below the sector. This is a year-round No-Kill water. Aquatic vegetation flourishes abundantly in many parts of the river, but doesn't hinder fly fishing.

Reserve Sector – River Hoczewka.

Average width of the river – 15 m, depth – 0.5 m, water volume flow – 1,4 m³/sec. (low volume is ca. 8.0 m³/sec). The water current is medium or slow. Eligible fish: brown trout – 50%, grayling – 50%, huchen (*Hucho hucho*) < 1%. Associated species: chub (*Leuciscus cephalus*), dace (*Leuciscus leuciscus*) and ide (*Leuciscus idus*). The sector is from the Baligród to the Hoczew. The practice waters are located immediately above the sector. Aquatic vegetation flourishes abundantly in many parts of the river, but doesn't hinder fly fishing.

Reserve Sector – River San – Sanok.

Average width of the river – 100 m, depth – 0.8 m, water volume flow – 30,0 m³/sec. (low volume is ca. 11.0 m³/sec). The water current is medium or slow. Eligible fish: brown trout – 20%, grayling – 80%, huchen (*Hucho hucho*) < 1%. Associated species: chub (*Leuciscus cephalus*), dace (*Leuciscus leuciscus*) and ide (*Leuciscus idus*). The sector is from Zagórz to the Sanok. The practice waters are located immediately above and below the sector. Aquatic vegetation flourishes abundantly in many parts of the river, but doesn't hinder fly fishing.
